## Program\_CreateTable JDBC

## Name: - Sangharsh Sitaram Narwade

```
import java.sql.*; import
java.sql.DriverManager; import
java.sql.Statement; public class
CreateTable {
public static void main(String[] args) {
//Step1: Load Driver or register try {
Class.forName("com.mysql.jdbc.Driver");
System.out.println("Driver Load Successfully");
//step 2: Create Connection
Connection con=DriverManager.getConnection("jdbc:mysql://localhost:3306/jdbc","root","");
System.out.println("Connection Create successfully");
//Step3: create statement object
Statement stmt= con.createStatement();
System.out.println("statement create successfully");
//step 4: write query
String sql="create table info (id int,name varchar(20),address varchar(30))";
//Step 5: execute query stmt.execute(sql);
System.out.println("table created successfully");
catch(Exception e) { e.printStackTrace();
}
} }
```
